Methodology

>This is where I insert Company's Methodology I suppose. South Africa is not resistance to the effect of climatechange. The effects of climate change are already observable extreme droughts,heat wave, tropical cyclones, and yes the melting of ice caps while we can'tlook at every weather phenomenon and immediately point to climate change thereincrease frequency and intensity of these events on a global scale is anindicator that climate is happening.

Company Information

Cost Plan Summary

<Cost PLAn>Climate change is defined as changes in climate caused,directly or indirectly, by human activities which alter the composition of theatmosphere.<

Conclusion

On my research or on my findings, I have established the threats of climate change that causes it to occur, and what I significantly

founded about this natural disaster is that it causes poverty which has been proven in history, and one of my supporting pictures show the statistics of climate change in different years. I have also established that there could solutions, for this climate change but they only need the commitment of humans.
